

DANIEL McCARTY

Senior Ruby On Rails Backend Engineer

Ruby on Rails | Distributed Systems | Platform Engineering | Cloud Infrastructure | PostgreSQL Optimization

Lafayette, CO

303-913-3970

dmccarty2829@gmail.com

PROFESSIONAL SUMMARY

Senior backend and platform-focused engineer with deep experience designing, building, and operating production Ruby on Rails systems for high-scale customer-facing applications. Strong background in distributed systems, API architecture, PostgreSQL performance tuning, cloud infrastructure, and safe deployment practices across AWS and GCP environments.

Hands-on experience leading backend architecture, DevOps ownership, database administration, CI/CD improvements, and cross-functional delivery in startup and fast-paced engineering environments. Proven ability to improve system reliability, scalability, and operational efficiency while owning critical production systems end-to-end.

Experienced across backend development, platform engineering, infrastructure modernization, and technical leadership with a strong focus on performance, maintainability, and business impact.

TECHNICAL SKILLS

Languages

Ruby, Ruby on Rails, Java, Python, JavaScript, TypeScript, C#, C/C++

Frameworks & Architecture

Ruby on Rails, Sinatra, React, REST APIs, GraphQL, Webhooks, Third-Party Integrations, Event-Driven Architecture, Distributed Systems, Background Jobs, System Design

Cloud, DevOps & Platform

AWS, GCP, Docker, Kubernetes, Git, GitHub Actions, CI/CD, Cloud Run, Cloud Functions, BigQuery, IAM, Safe Deployment Practices, Feature Flags, A/B Testing

Data & Messaging

PostgreSQL, MySQL, Redis, Sidekiq, RabbitMQ, Performance Tuning, Query Optimization, Database Administration

Engineering Practices

Unit Testing,RSpec, Minitest, Integration Testing,,Test-Driven Development (TDD), Code Reviews, Agile Methodologies, Technical Leadership, Cross-Functional Collaboration, AI-Assisted Development

PROFESSIONAL EXPERIENCE

Auddia

Senior Ruby on Rails Engineer

2013 – 2026

Owned backend platform development for a multi-platform mobile application ecosystem serving hundreds of radio stations and large-scale media content distribution across live radio, music metadata, advertising, and podcast delivery.

Designed, built, and maintained a collection of Ruby on Rails API applications that served as the central data platform for all mobile applications and internal operations.

- Developed and maintained core Rails backend systems powering real-time media-rich content feeds across radio, podcast, and advertising platforms
- Designed, built, versioned, and maintained REST APIs serving mobile applications, partner integrations, third party services, and internal administrative tools
- Improved API performance and reliability through query optimization, background job design, caching strategies, and production debugging
- Improved PostgreSQL performance and production reliability through database tuning, indexing strategy, query optimization, and operational ownership
- Improved product reliability and delivery speed through ownership of database performance, deployment pipelines, and production platform operations.
- Led infrastructure operations across AWS and later GCP, supporting a full production migration while maintaining application stability and service continuity

- Managed deployment and operational ownership of Cloud SQL, Cloud Run, Cloud Functions, BigQuery, IAM, and additional GCP services
- Automated discovery and validation of radio stations, podcasts, and media inventory through third-party API integrations and web crawling systems
- Built internal and partner-facing JavaScript/TypeScript administrative tools to streamline operations and content management workflows
- Supported safe deployments, feature rollouts, and production stability using CI/CD improvements, deployment discipline, and platform ownership
- Participated in peer code reviews, release planning, and production deployment activities to maintain code quality and delivery reliability
- Investigated production issues, debugged complex backend failures, and implemented long-term fixes to improve platform stability and performance
- Wrote and maintained unit tests and integration tests using RSpec to support safe releases and long-term code quality

Core Stack: Ruby on Rails, PostgreSQL, Redis, Sidekiq, REST APIs, AWS, GCP, Cloud SQL, Cloud Run, BigQuery, JavaScript, TypeScript

CRI / Scottrade

Senior Java Engineer

2009 – 2013

Built Java-based web services and third-party integrations supporting stock trading and banking systems used by internal teams, brokers, and millions of customer accounts.

Worked on high-availability financial systems requiring reliability, transactional consistency, and zero-downtime operational standards.

- Developed Java services supporting critical trading and banking workflows
 - Integrated third-party applications into the broader Scottrade product ecosystem
 - Supported highly available production systems with strong uptime and operational reliability requirements
-

Hart InterCivic

Senior Java Engineer

2003 – 2008

Developed statewide voter registration and election management systems used across Texas, supporting 254 counties and more than 12 million voters.

Built and maintained large-scale J2EE applications running on WebSphere with Oracle database infrastructure.

- Owned design and development across election management, jurisdiction management, absentee balloting, and reporting systems
 - Supported high-reliability public sector systems with strict operational requirements and large-scale data management
-

CSS

Senior Engineer

2002 – 2003

Led re-architecture of legacy thick-client financial tools into modern web-based applications for traders, brokers, and financial services teams.

- Re-architected desktop applications into scalable n-tier web applications
 - Built contact management systems using C# and C++
 - Mentored junior engineers and established development standards and architecture recommendations
-

ADDITIONAL EXPERIENCE

Connexn Technologies — Senior Java Engineer (2001)

Telecom middleware modernization and Java architecture migration

SmartTalk — Senior Java Engineer (2000 – 2001)

Large-scale messaging engine supporting phone, SMS, FAX, and email workflows

NETdelivery Company — Senior Engineer / Team Lead (1997 – 2000)

Online postal, secure document delivery, and payment systems for Canada Post

SCC Communications — Senior Engineer (1989 – 1997)

Public safety software including CAD (911), jail systems, and records management platforms for state, county, city level jurisdictions serving more than 21 million people
